---

**Full-Stack Developer** focused on creating scalable solutions using **React**, **Node.js**, **Java (Spring Boot)** and **TypeScript**. Experience in the design of modern interfaces and secure backend services (**JWTs**), integrating **REST APIs** and **SQL/NoSQL databases**. I bring value throughout the software lifecycle, applying good architecture practices, automated testing (**Jest**, **JUnit**) and deployment automation (**CI/CD**) in the cloud (**Oracle Cloud**, **Azure Container Apps**) with **Docker** and **Nginx**. Solid practical base acquired in the General Directorate of Customs and freelance projects.

## PROFESSIONAL EXPERIENCE

---

### Property Group

Full-Stack Web Developer (Freelance)

National District

June 2025 – June 2026

- **I designed and implemented** the modular architecture of the frontend using **React** and **TypeScript**, ensuring clean, highly maintainable code and facilitating the scalability of the platform.
- **Developed an administrative dashboard** with role-based access control system (**RBAC**) through **JWT**, allowing the *Superadmin* to securely manage employee permissions and property CRUD.
- **I built a RESTful API** with **Node.js**, **Express**, and **MongoDB**, developing a dynamic property filtering and categorization system synchronized in real-time with the public interface.
- **Optimized infrastructure** by migrating to **Oracle Cloud (Always Free Tier)**, reducing customer server costs to zero, and implementing **Docker** to ensure environment parity.
- **I automated the CI/CD pipeline** with **GitHub Actions** and **Nginx (SSL)**, achieving immediate automatic deployments when committing changes to the production repository.

### Directorate General of Customs (DGA)

Frontend Web Developer

National District

March 2025 – June 2025

- **Co-developed the MVP frontend (Phase 1)** of an institutional POS system for cafeteria management, successfully completing the delivery of the critical billing, employee control and order history modules.
- **Implemented the global state architecture** of the application using **Context API** in **React 19** and **TypeScript**, ensuring a smooth, reactive, and delay-free data flow during the real-time billing process.
- **Consumed and integrated backend services** developed in **ASP.NET Core**, efficiently managing data persistence, session lifecycle and path protection on the client through JWT-based authentication.
- **Ensured the quality and consistency of the software** through manual cross-browser testing and thoroughly documented the catalog of reusable components according to the institution's style guides, facilitating the transition for future development phases.

- **Audited and optimized between 10 and 20 daily technical solutions** in **JavaScript**, evaluating the algorithmic accuracy, efficiency, and readability of responses generated by large language models (LLMs).
- **Identified and corrected logic flaws, technical hallucinations, and overly verbose code**, rewriting software snippets under strict *Clean Code* standards and good programming practices.
- **Documented in detail the acceptance criteria** and provided high-quality technical feedback for the *fine-tuning* process of the model, ensuring the delivery of optimal and safe code responses.

EDUCATION

---

Technological Institute of the Americas

Software Development Technologist — Graduate

La Caleta, Boca Chica

2021 - 2025

ADDITIONAL SKILLS

---

- Technologies: React, Next.js, TypeScript, JavaScript, TailwindCSS, Sass/SCSS, Node.js, Express, GraphQL, Java, Spring Boot, MongoDB, PostgreSQL, Git, Docker, GitHub Actions, Oracle Cloud, Azure Container Apps, Nginx, Postman, Jest, JUnit
- Languages: **Spanish** (native) · **English** (B2)

Professional References

---
